2 BY INDUSTRIES

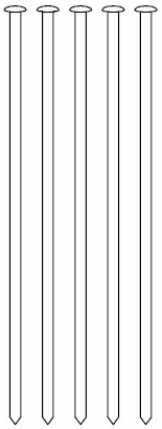
(2) 6" FILLER END CAPS

(16) 28" SPIKES



(31) BORDER TIMBERS

(16) 6" RUBBER STANCHIONS

Here are seven easy steps to complete the installation of your new 20' Portable GaGa Ball Pit from 2by2 Industries:

1. In a large, flat area, locate the center point of your future GaGa Ball Pit. Mark that spot for use with Step 2.
2. From that spot, attach one end of a rope, string, or any easy fabric. This string needs to be approximately 10' long. From there you will stretch it out and walk in a large circle. This gives you the approximate size of the GaGa Ball Pit.
3. You will start with placing the bottom row of border timbers (16 total) and create a large circle. Each junction of the borders needs to be placed on top of the 6" Rubber Stanchions. Make sure the hole in the Rubber Stanchion is facing up. Gently run a 28" spike through the border and into the Rubber Stanchion.
4. Once you have the first row in a circle, add the second row of borders on top of the first row. You will have to remove and re-insert the spike in place to allow it to go through the ends of four borders.
5. You will notice that there are only 15 borders for the top row, this is to allow an entry/exit point. Instead of using a border timber in that gap, you will use the 6" filler end caps to fill the spaces. There is a border that includes a sign on it. This border should be the final border placed next to the opening. The sign will sit next to the entrance.
6. Once fully assembled, walk around the circle and correct any pivot points that might not look like a perfect circle. The spikes will rest inside the Rubber Stanchions and should provide stability and strength.
7. Enjoy your new Portable GaGa Ball Pit!
